

Double scissor lift table for sale

1. What is double scissor lift table?

A double scissor lift table is a type of hydraulic lift table that uses two sets of scissor mechanisms to raise and lower the platform. This design allows for a higher lifting height and increased weight capacity compared to a single scissor lift table. Double scissor lift tables are commonly used in industrial settings for lifting heavy loads to different heights. There are 2 types of double scissor lift tables, classify based on increased power, manual and electric. Manual double scissor lift tables have a foot control on the chassis, the platform raise by stepping on it, descend by manual release valve on the handle.

Electric double scissor lift tables have lead acid battery built in to provide lifting power, so it's much easier to raise the platform only by the button. Of course electric type is expensive than manual type, we will get to the prices later.

2. The advantage of double scissor lift table.

Increased lifting height: Double scissor lift tables can reach higher elevations compared to single scissor lift tables, making them suitable for applications that require lifting to greater heights. For example regular single scissor lift table maximum lifting height is 1000mm, double scissor lift table can reach 2000mm at max.

Higher weight capacity: The double scissor design allows for a higher weight capacity, making it ideal for lifting heavier loads. Like 500kg, 800kg, 1000kg, 1500kg and 2000kg are all available.

Stability and safety: The dual scissor mechanism provides added stability and support, reducing the risk of tipping or tilting during lifting operations.

Versatility: Double scissor lift tables can be used for a wide range of applications, including material handling, assembly work, maintenance tasks, and more.

3. Application scenarios of double scissor lift table

Double scissor lift tables are versatile pieces of equipment that can be used in various industries and applications. Some common application scenarios for double scissor lift tables include:

Warehousing and logistics: Double scissor lift tables are often used in

warehouses and distribution centers for loading and unloading goods, palletizing, and order picking. They can help improve efficiency and safety in material handling operations.

Manufacturing and assembly: Double scissor lift tables are used in manufacturing facilities for assembly work, positioning parts or components at the right height for workers to access easily. They can also be used for ergonomic workstations to reduce strain on workers.

Automotive industry: Double scissor lift tables are commonly used in automotive repair shops and garages for lifting vehicles to a comfortable working height for maintenance, repairs, and inspections.

Retail and commercial settings: Double scissor lift tables can be used in retail stores, supermarkets, and other commercial settings for stocking shelves, displaying merchandise, and handling goods.

Construction and building maintenance: Double scissor lift tables are used in construction sites and building maintenance for lifting tools, equipment, and materials to elevated work areas. They can also be used for installing fixtures, painting, and other tasks that require working at height.

4. What is the cost of double scissor lift table?

The cost of a double scissor lift table can vary depending on the type, size, weight capacity, quantity and other customized factors. Here is a reference price list of double scissor lift table costs, it is recommended to contact manufacturers or suppliers directly for specific pricing information.

4.1 Manual double scissor lift table costs

Model	Load (kg)	Platform size (mm)	Min-Max height (mm)	Self weight (kg)	packing size (mm)	EXW price (USD)
PTS150A	150	700*450*35	295-1260	58	820*470*315	275
PTS350A	350	905*500*50	350-1300	105	1010*520*370	370
PTS350A-1.5	350	905*500*50	350-1500	105	1010*520*370	370
PTS500	500	905*500*50	360-1500	115	1060*520*380	475
PTS500-2	500	905*500*50	420-2000	140	1060*520*440	580
PTS800	800	1200*600*58	450-1500	155	1380*610*470	580
PTS1000	1000	1200*600*80	500-1700	220	1380*620*520	745
PTS1500	1500	1200*600*80	500-1700	245	1380*620*520	800

4.2 Electric double scissor lift table costs

Model	Load(kg)	Platform size (mm)	Min-max height (mm)	Power&Voltage (12V)	Self weight (kg)	EXW price (USD)
DPS350/500	350/500	905*500*50	360-1500	0.8KW, 60AH	150	1250
DPS500-2	500	905*500*50	480-2000	0.8KW, 60AH	200	1500
DPS800/1000	800/1000	1200*600*80	500-1700	1.6KW, 120AH	300	1650
DPS2000	2000	1200*600*80	550-1700	2.0KW, 120AH	400	2000

5. How can i get a quote?

Please leave us a message or send an email, and we will contact you to send a quotation as soon as we receive your message.
