

## How much does electric lift tables cost

What is the electric lift tables?

Electric lift tables are mobile hydraulic lifting platforms that powered by battery power. They are used to raise and lower heavy loads to a desired height, making it easier and safer for workers to handle materials in warehouses, manufacturing facilities, and other industrial settings. Electric lift tables are commonly used for tasks such as loading and unloading trucks, assembling products, and positioning materials for processing or storage. They come in various sizes and weight capacities to suit different applications. There are also different accessories like balls and rollers on the table to make the goods transfer more smooth, removable guardrails to protect the goods.

What are the specifications of electric lift table?

In order to meet the work needs of different customers, our products have different parameters. Please check the parameter table below, these are our standard models, mostly are in stock. If it can't meet your request, we can also provide customize service, parameters such as load capacity, platform size, and lifting height, other specifics such as material, color and other accessories.

Number	Model	Load capacity (kg)	Platform size (mm)	Min-Max height (mm)	Motor , Battery (12V)
1	DP300/500	300/500	950*500*50	280-900	0.8KW , 60AH
2	DPS350/500	350/500	905*500*50	360-1500	0.8KW , 60AH
3	DPS500-2	500	905*500*50	480-2000	0.8KW , 60AH
4	DP800/1000	800/1000	1200*600*80	380-1000	1.6KW , 120AH
5	DP2000	2000	1200*600*80	400-1000	2.0KW , 120AH
6	DPS800/1000	800/1000	1200*600*80	500-1700	1.6KW , 120AH
7	DPS2000	2000	1200*600*80	550-1700	2.0KW , 120AH
10	SJY35-200	350	1200*600*50	360-2000	0.8KW , 60AH
11	SJY35-200	350	1200*600*80	500-2000	0.8KW , 60AH

What are the usage scenarios of electric lift table?

The use of electric platform vehicles includes but is not limited to aerial work, equipment installation, maintenance and other scenes that require aerial work.

Electric platform vehicles, especially battery-type aerial work platform vehicles, are special equipment designed for aerial work. It combines the functions of lifts and battery vehicles. Through the DC power provided by the battery vehicle, the lift and the whole machine can be moved without an external power supply. The advantages of this equipment are easy mobility and a wide range of operation flow. It is particularly suitable for various aerial work scenes with a large operating range and strong mobility. Whether it is serving aerial work, equipment installation, maintenance, etc. in various industries, the vehicle-mounted aerial work platform can play an important role.

What is the cost of electric lift tables?

The price of an electric lift table depends on the size, capacity, and features of the lift table. On average, the basic price of an electric lift table ranges from \$400 to \$2,500. The price also difference from customized accessories, such as different color, SUS304 lift body, add balls or rollers to the platform, bigger platform or heavier load, remote control, platform guardrail and so on. You can choose products with different parameters according to your work needs. Here is a price list of our standard models, this is a retail price, if your order quantity is big, we will give you wholesale price. Please feel free to contact us if you are interesting in our electric lift table.

Model	Unit price(USD)
DP300/500	1550
DPS350/500	1650
DPS500-2	2000
DP800/1000	2050
DP2000	2350
DPS800/1000	2200
DPS2000	2550

SJY35-200	2050
SJY35-200	2200
SJY30-300	2550
SJY30-400	2750
